

Blue Letter Bible Suite

User Guide • Version 5.2.44

Contents

1. Get Started

Blue Letter Bible Suite adds quick ways to send Bible references, words, phrases, and selected passages to Blue Letter Bible (BLB) .

Install

- Open your browser's extensions page.
- Turn on Developer mode if you are installing an unpacked extension.
- Choose Load unpacked and select the extension folder.

chrome://extensions ■

brave://extensions ■

Open the Suite controls

Click the Blue Letter Bible Suite extension icon. The popup contains the main switches and study controls.

Settings are remembered for the websites where you use them.

2. Search from the Address Bar

The quickest way to send a search to BLB is the browser's address bar.

- Focus the address bar.
- Type b , then a space.
- Enter a Bible reference, word, phrase, Strong's number, or search with a range.
- Press Enter .

3. Select Text and Open It in BLB

On supported pages, select text and use Show on BLB . The Suite examines the entire selection , so a long paragraph or several paragraphs can be used.

What happens to your selection?

Example: selecting a whole passage

Scripture tells us to “exercise thyself unto godliness” (1 Timothy 4:7). This isn't a passive suggestion—it's an active command. Godliness requires work, effort, and intentionality. The Apostle Paul instructs us to “work out your own salvation with fear and trembling” (Philippians 2:12).

The two references in this selection are 1 Timothy 4:7 and Philippians 2:12 . The expected result is one MultiVerse view containing both references.

4. Multiple References and MultiVerse

MultiVerse is used when a selection contains more than one Bible reference.

- Select text containing the references.

- Choose Show on BLB by floating button, right-click, or Alt + B .
- The Suite collects the references it finds.
- BLB opens them together in MultiVerse.

5. Show on BLB

Show on BLB is available in three convenient ways:

Floating button

When enabled for the current website, a small Show on BLB button appears near the bottom-right of the page. Select text, then click it.

Right-click menu

Select text, right-click, and choose Show on BLB .

Keyboard shortcut

Select text and press Alt + B .

Site setting

The Show on BLB setting controls the floating button and the right-click menu. It is remembered separately for websites.

6. Double-Click BLB

Turn on Double-Click BLB in the Suite popup for a fast way to open Bible-related text.

Examples include selecting or double-clicking 150 in Psalm 150 , or 28 in Romans 8:28 .

7. Bible References in Web Pages and PDFs

On supported web pages and PDF documents, you can select Bible references and send them to BLB.

- Select the reference or a larger passage containing references.
- Right-click and choose Show on BLB , or use Alt + B .
- One reference opens normally; multiple references open in MultiVerse.

8. Webster's 1828

On supported Webster's 1828 dictionary pages, the Suite can find Bible references and provide a convenient BLB button.

- Use the Show on BLB button provided on the page.
- If the page contains one Bible reference, that reference opens normally.
- If the page contains multiple Bible references, they can open together in MultiVerse.
- The dictionary word itself is not treated as a Bible reference.

9. Bible-Link Redirection

When Redirect External Bible Links is enabled, supported Bible links from other websites can open through BLB instead of sending you to the original destination.

- Open the Suite popup.

10. Study Sessions and History

Study Sessions help you collect Bible references, Strong's entries, search terms, and notes under a topic while you study.

Start a study

- Open the Suite popup.
- Choose or create a study topic.
- Start recording.
- Study normally. The Suite records supported study activity for that topic.
- Add your own notes in the Notes area.
- Stop the session when you are finished.

History

The History controls let you review the study information by category:

- Verse References — open the references collected for the topic.
- Strong's — open the Strong's entries collected for the topic.
- Search Terms — search the terms collected during the study.

Download your study

Use Download PDF to save study notes. You can download:

- Selected Topic — the current topic.
- All Topics — all stored topics together.
- By Date — studies within a selected date range.

11. Copy Bible Text with Links

BLB's copy controls can preserve clickable Bible links when rich text is copied from supported BLB pages.

- Use BLB's normal Copy or Copy to Clipboard button.
- This also applies to supported MultiVerse views.
- When you want plain text only, use Ctrl + Shift + V in apps that support plain-text paste.

12. Search Ranges

Add a range keyword to an address-bar search to limit where BLB searches.

The range keywords are shortcuts for BLB's search-range controls. You can also search without a range.

13. Case-Sensitive KJV Search

The browser address bar supports an optional **case-sensitive KJV search** when exact capitalization matters.

Command	What it does
b cs Jesus	Finds the exact case-sensitive word Jesus .
b cs jesus	Finds lowercase jesus only.
b cs "Jesus Christ"	Finds the exact case-sensitive phrase.
b cs Jesus Christ	Same phrase search without quotation marks.

Corpus: the feature searches the verified original-case KJV corpus containing all 31,102 verses.

Matching: capitalization is significant for individual words and exact phrases.

Destination: matching references are sent directly to Blue Letter Bible's native MultiVerse in the current tab.

Internal page: `case-sensitive-search.html` is preserved for internal testing/visual inspection only; it is not the user-facing destination of `b cs`.

Normal search: existing `b . . .` omnibox behavior is unchanged.

Examples

`b cs God` and `b cs god` are different searches because capitalization is significant.

14. Quick Reference

Want to...	Use
Search from the address bar	<code>b + space + your search</code>
Open selected text in BLB	Floating Show on BLB , right-click → Show on BLB , or Alt + B
Open several references together	Select text containing the references → Show on BLB
Open a KJV word quickly	Turn on Double-Click BLB and double-click the word
Open a Strong's entry	Double-click a Strong's number or search it with <code>b</code>
Record a study	Open the popup → choose a topic → Start
Save study notes	Study Sessions → Download PDF

15. Troubleshooting

Show on BLB is not visible

- Open the Suite popup and make sure Show on BLB is ON for that website.
- Remember that the floating button and right-click menu are controlled by this setting.
- You can still try Alt + B.

A selected reference opened incorrectly

- Select a little more surrounding text so the complete Bible reference is included.
- For a larger passage, you can select the whole passage; the Suite checks the entire selection for references.
- Check that the book name and chapter/verse are written clearly.

Several references are not opening together

- Make sure the references are part of the same selection.
- Use Show on BLB or Alt + B after selecting the passage.
- If references are found, the Suite opens them in MultiVerse rather than a separate Criteria Search window.

Double-click is not doing anything

- Open the Suite popup and turn on Double-Click BLB.
- Try it on ordinary page text rather than links, buttons, form fields, or editable text.

Study information is not being recorded

- Check that the correct study topic is selected and recording is started.
- Open History after you have performed a supported study action.
