WELCOME TO BIBLE STUDY

Blue Letter Bible Suite | Friendly User Guide | Version 5.2.51.73

Find Bible passages, look up words, open several references together, and keep notes on your study. This guide explains the features in everyday language. Start with one feature and explore the others when you need them.

Start here

1. Search from your browser address bar: type b, press Space, then enter a word or Bible reference.
2. On a webpage, select a Bible reference and choose Show on BLB.
3. For a quick word lookup, turn on Double-Click BLB and double-click a word.

You do not need to use every feature. The quick reference near the end is here whenever you need a reminder.

1. SEARCH AND OPEN REFERENCES

Search from the address bar

The address bar is the box at the top of your browser where you type a website address or search the web.

1. Click the address bar.
2. Type b and press Space.
3. Type what you want to find and press Enter.

b John 3:16 - open a Bible passage
b grace - search for a word
b cs LORD - find exact capitalization in the KJV

Select text and open it in BLB

Select a Bible reference or passage on a webpage, then use one of these options:

- Click the floating Show on BLB button, if it appears.
- Right-click the selected text and choose Show on BLB.
- Press Alt+B on your keyboard.

Select the complete reference or passage. If the result looks wrong, select the reference plus a little surrounding text.

2. SEVERAL REFERENCES AND QUICK LOOKUPS

Open several references together

Select the whole portion of text containing the references, then use Show on BLB or Alt+B.

> For example, select: Romans 10:9,10
> The Suite can open verses 9 and 10 together.

A continuous verse range in one Chapter can open as a normal passage view. Other groups of references may open together in MultiVerse.

Double-Click BLB

Turn on Double-Click BLB in the Suite controls. Then double-click a word on a webpage for a quick lookup. Supported Strong's numbers can also be looked up.

1. Open the Suite controls from the browser toolbar.
2. Turn on Double-Click BLB.
3. Return to a webpage and double-click a word.

> If nothing happens, check that the feature is switched on. Try ordinary page text-not a button, text box, or link.

3. OTHER HELPFUL FEATURES

Bible references in webpages and PDFs

On supported webpages and PDFs, select a Bible reference or surrounding text and use Show on BLB.

Webster's 1828

Use the Webster's 1828 lookup feature when you want to explore an English word's historical dictionary meaning. Follow the lookup control available in the extension.

Bible-link redirection

For supported Bible links, the Suite can take you to the corresponding passage on Blue Letter Bible. The result depends on the link and page.

Copy Bible text with links

On supported Blue Letter Bible pages, use the normal Copy or Copy to Clipboard control. Pasted rich text can retain clickable Bible links.

> To paste plain text, try Ctrl+Shift+V in the app where you are pasting, if supported.

4. STUDY SESSIONS AND HISTORY

Study Sessions can keep a record of supported study activity. This is optional; you can search and open passages without recording a study.

Start a study

1. Open the Suite controls from the browser toolbar.
2. Choose or create a study topic.
3. Start recording before you begin.

Review your history

Open History to review information saved under your topics. Depending on the activity, you may see:

- Verse References: Bible passages collected during the study.
- Strong's: Strong's entries collected during the study.
- Search Terms: terms searched during the study.

Download your study

Use Download PDF to save notes for later. Choices include the selected topic, all topics, or studies within a date range.

> If information is missing, check that the intended topic is selected and recording has started.

5. SEARCH OPTIONS AND QUICK REFERENCE

Limit where a search looks

```
b faith OT - Old Testament
b faith NT - New Testament
b covenant Torah - Torah
b kingdom gep - Gospels
```

Add a range keyword to an address-bar search to limit where BLB searches. You can also search without a range.

Search exact KJV capitalization

Use b cs followed by a word or phrase when capital letters matter. LORD and Lord can produce different results; matching references open together on Blue Letter Bible.

```
b cs JESUS
b cs LORD
b cs "Lord God"
```

Quick reference

Search: b + Space + your words or Bible reference

Open selected text: Show on BLB, right-click menu, or Alt+B

Open several references: select them together, then Show on BLB

Look up a word: enable Double-Click BLB, then double-click

Record a study: choose a topic and start recording

Save notes: Study Sessions > Download PDF

6. IF SOMETHING DOES NOT WORK

Show on BLB is not visible

- Check whether Show on BLB is enabled for that website in the Suite controls.
- Try selecting the text again or use Alt+B.

A reference opens incorrectly

- Select the full book name and reference, including chapter and verse.
- For several references, select the whole group together.

Several references do not open together

- Make sure all references are in one selection, then use Show on BLB or Alt+B.

Double-click does nothing

- Check that Double-Click BLB is turned on; try ordinary webpage text.

Study information is missing

- Check the selected topic and make sure recording was started.

> Start small: search a verse from the address bar, or select a reference and choose Show on BLB. This guide is independent and is not affiliated with Blue Letter Bible.
